EPORDO P SERIES

Smart identification & access management

Connect devices. Unify identities. Control access. Capture every event. Terminals verify and open doors; Connect links and streams events; business rules stay in your systems.

ET-P5 · IP65 | **ET-P7 · 7 inch** | **+ EPORDO Connect**

ET-P5 · IP65 Waterproof

ONE SOLUTION · THREE LAYERS

One solution. Three clear layers.

Not only a recognition terminal. Not only an API toolbox. P Series joins field recognition, platform connectivity, and your business apps into one offer.

Customer applications

Customer Applications

Membership, staff, visitors, tickets, venues—billing, approvals, and experience rules live in your (or your SI's) systems.

EPORDO Connect

Device connectivity & integration

Device onboarding, identity sync, live events, remote door control, plus REST / Webhook / MQTT exits.

ET-P5 / ET-P7

Identity recognition & door control

Face, fingerprint, palm, RFID, PIN and door actuation on site (modalities per hardware config).

01
Verify & open on site
P5 / P7 handle recognition and doors

02
Connect the fleet
Devices, events, and commands in one place

03
Plug into your apps
Rules stay in the customer layer

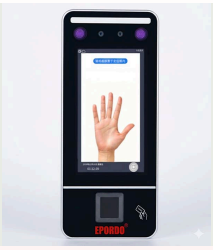

04
Integrate your way
REST / Webhook / MQTT

HARDWARE

One Connect. Two terminal forms.

P5 (~5", IP65) for outdoor and wet environments; P7 (~7") when operators need a larger display and UI.

IP65

ET-P5 · ~5 inch

Preferred for outdoor lanes, humid areas, and doors that need a stated protection rating.

- IP65 waterproof
- Face / palm / fingerprint / card (per config)
- Door control + event reporting

7 inch

ET-P7 · ~7 inch

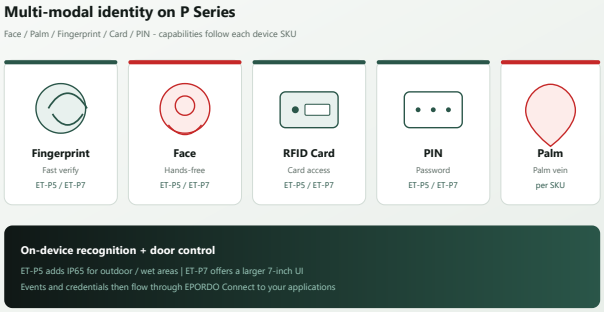

Choose when operators need more screen and interaction—still on the same Connect.

- Larger display & UI
- Same-series modalities (per config)
- Part of the P Series solution

IDENTITY

Multi-modal identification

Verification and door open happen at the entrance; projects enable modalities per installed hardware.

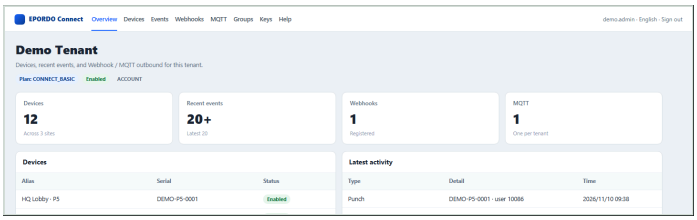

Display	~5 inch	~7 inch
Protection	IP65	Per model datasheet
Identification	Face / palm / fingerprint / RFID / PIN, per hardware config	
Platform	EPORDO Connect (devices, identity, events, commands, integration exits)	

Portal and REST short model codes are P5 / P7; marketing datasheets may say ET-P5 / ET-P7 for the same units.

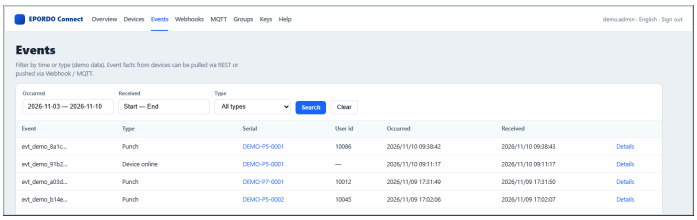

EPORDO CONNECT

Connectivity & integration platform

Connect is not your business app and not a finished payroll engine. It supplies device-side facts and controllable actions—then opens them to your systems.

Portal preview · Overview (demo data)

Portal preview · Event list (demo data)

Device ops

Register, group, and watch online / offline across sites.

Events & commands

Pass facts, enrollments, remote open results, and more.

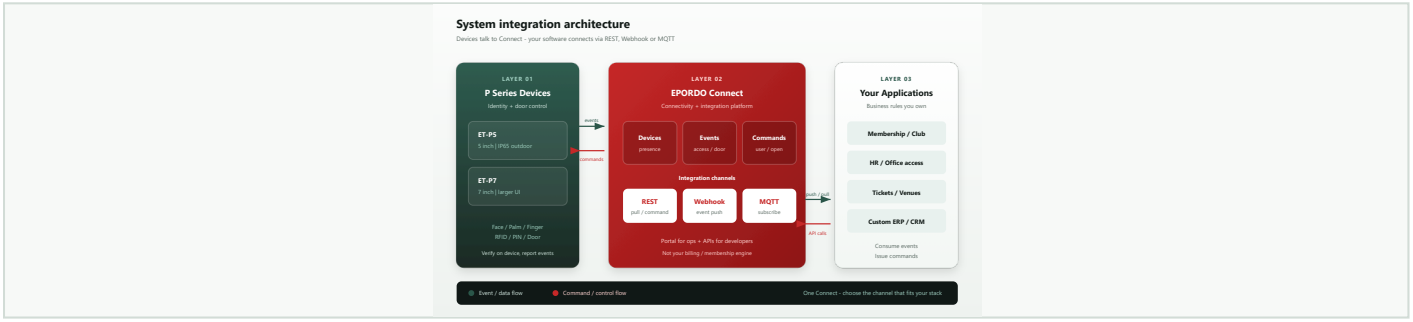

Identity sync

Push supported credentials across compatible devices.

INTEGRATION

One Connect. Three ways in.

Match the customer's architecture—don't force a stack rewrite.

REST API

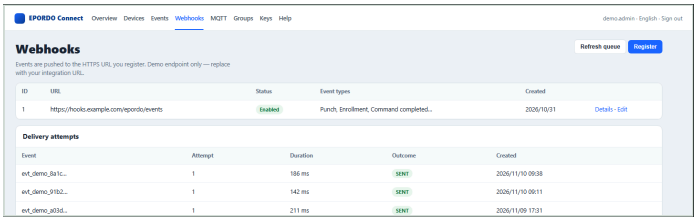

Query on demand, issue commands, page through events.

Webhook

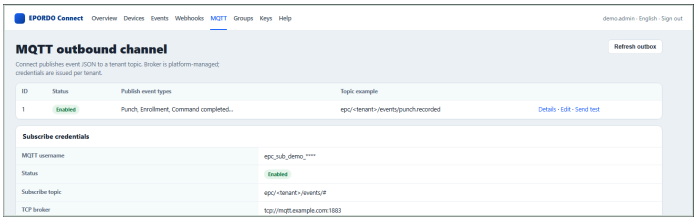

Push events to the customer HTTPS URL as they happen.

MQTT

Long-lived subscribe for existing message buses.

Webhook setup & delivery (demo data)

MQTT channel & credentials (sample host)

SCENARIOS

Four typical deployments

Same “terminal + Connect + customer app” pattern—swap industry rules.

01 · Multi-site membership

Gyms, training, clubs: face/card entry; your system checks membership or deducts visits; desk can remote-open.

02 · Multi-site workplace

Enroll at HQ; branches share one Connect tenant; link OA / HR via REST or Webhook.

03 · Campus / building / school

Your ACL decides zones; Connect places credentials on device groups and returns pass facts.

04 · Venues & facilities

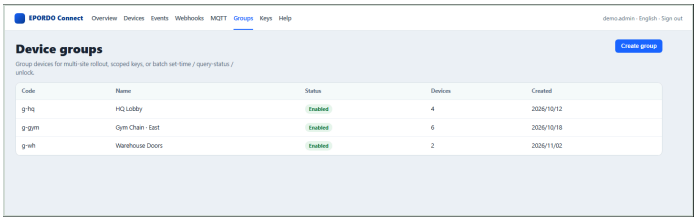

Pass facts drive redemption, prompts, and reports in ticketing/facility systems; monitor many entrances together.

Model tip: outdoor/wet → ET-P5 (IP65); larger UI → ET-P7. Both use the same Connect.

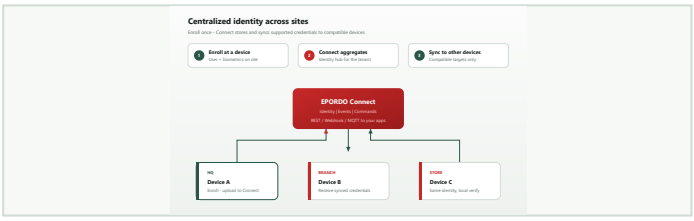

BOUNDARY

Ownership map (for accurate channel talk tracks)

Capability	Terminal	Connect	Customer app
On-site verify & open	Primary		
Event intake / commands		Primary	
Membership / master data		Sync credentials & events	Primary
Shifts / payroll, etc.		Raw verification events	Build or choose elsewhere

Device groups · multi-site ops (demo)

Central identity · enroll once, sync many

Connect identity & access to your business

Book a demo, grab the brochure, or open the Connect portal to see the operator experience.
